

Mouse anti- Human Herpes Simplex Virus II
Polyclonal
Cat. no. PS323

Specificity

Herpes simplex virus is quite ubiquitous and is quite variable in its presentation in human disease. Type II typically involves the genitalia. It may affect the skin or internal organs (typically brain, lung, liver, adrenal gland, or GI tract) of immunocompromised individuals. This polyclonal antibody reacts with Type II Herpes viruses. There may be cross-reactivity with varicella zoster virus at higher concentrations. Cross-reactivity with CMV or Epstein-Barr virus is not seen with this antibody.

Immunoglobulin type

-

Use

This antibody can be used in IHC Paraffin sections (1:100 – 1:500)

Presentation

1 ml supernatant in Tris Buffer, pH 7.3-7.7, with 1% BSA and <0.1% Sodium Azide
