**Additional info**

CD20 is a transmembrane protein in late B-cell precursors and mature B-cells that plays a role in regulating proliferation and differentiation. CD20 expression is lost at the plasma cell stage of differentiation. MON 3226 (pan B-cell) has rarely been detected in T-cell malignancies, and is a dependable marker of B-cell lymphomas such as DLBCL. CD20 expression is present in some thymomas. It does not cross-react with non-hematopoietic neoplasms.
